## Door closer

various advanced functions available for you to choose:

Range of dual-speed control: The closing speed is 180-15° and the locking speed 15-0°.

Stopping function at 90°: As opening the door up to 90°, the door can maintain at the state of 90°.

Closing and locking speed adjusted successively: Starting from 90°, the closing speed can be adjusted the fastest speed within 3 seconds but the slowly-closing speed is over 40 seconds.

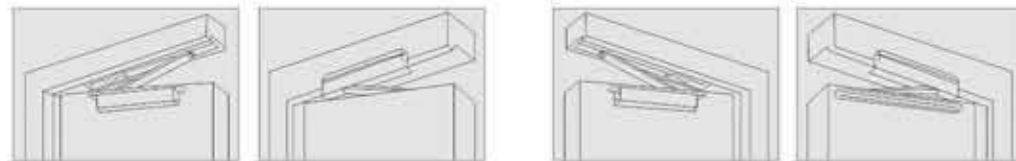

Buffer function: After the door is opened over 65°, the door closer can produce a certain damping force, avoiding it impacting the wall due to too much opening force and speed, and its damping force is adjustable.

Time delay closing function: The manufacturer sets the door at 20 seconds between 180° and 65°, which can be adjusted at least one second, convenient for door or disabled going in and out.

Adjustable function for door closing force: Select the different door closing force in accordance with the door of different size and different weight. The force-adjustable door closer can adjust the spring to min. closing force so as to lessen the opening resistance and enable the old or disable going in and out conveniently.
